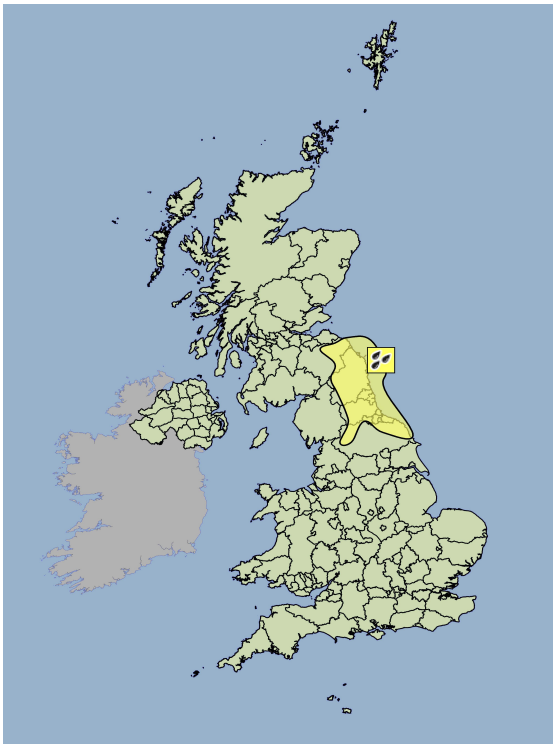
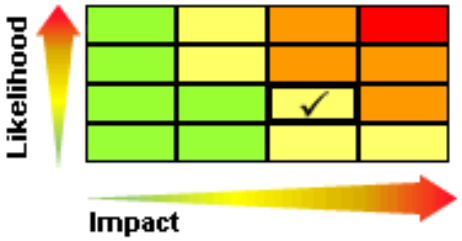
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal system will become slow moving across the warning area during Tuesday, bringing spells of rain, some heavy, particularly over high ground exposed to the fresh to strong easterly winds. There is uncertainty about the exact location of the heavier rain, but totals are expected to reach 20-40 mm fairly widely, with as much as 50-80 mm over some high ground.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **23:05 on Mon, 04th Jan 2016** until **23:55 on Tue, 05th Jan 2016**

Bursts of heavy rain have already affected parts of northeast England and North Yorkshire, and are expected to continue, probably quite persistent in places, through the rest of Monday evening and Tuesday.

Please be aware that given the already saturated ground that there is a risk of flooding. This is an update to draw attention to an increased likelihood of localised medium impacts from surface water flooding, these most likely in parts of Northumberland, Borders and the east of the North York Moors.
